Directions (Q. Nos. 25-30) : Read the following passage carefully and answer the questions that follow:

The political system always dominates the entire social scene, and hence those who wield political power are generally able to control all the different social subsystems and manipulate them to their own advantage. The social groups in power, therefore, have always manipulated the education systems, especially when this happened to depend upon the state for their very existence, to strengthen and perpetuate their own privileged position. But here in lies a contradiction. For the very realisation of their selfish ends, the social groups in power are compelled to extend the benefits of these educational systems to the underprivileged groups also. The inevitable task is generally performed with three precautions abundantly taken care of :

- (i) The privileged groups continue to be the principal beneficiaries of the educational system, dominate the higher stages of education or the hard core of prestigious and quality institutions are the most useful of courses, so as to safeguard their dominant position of leadership in all walks of life;
- (ii) The system is so operated that underprivileged groups can utilise it only marginally in terms and the bulk of them become either dropouts or push out and get reconciled to their own inferior status in society; and
- (iii) The few from the weaker sections that survive and succeed in spite of all the handicaps are generally co-opted within the system to prevent dissatisfaction.

SSF JAMIA MILLIA ISLAMIA
New Delhi

But the education is essentially a liberating force so that, as time passes some underprivileged groups do manage to become aware of the reality, the number of the educated persons soon becomes too large to be fully co-opted, and many able individuals among them strive to organise and liberate the weak and the underprivileged. The resultant awareness of the people, combined with suitable organisation necessary leads to adjustment in the social structure and to an increase in vertical mobility so that new groups begin to share power. Eventually, other social changes also follow and the traditional, inegalitarian and Hierarchical social structure tends to be replaced by another which is more modern, less hierarchical and more egalitarian. The educational system, therefore is never politically neutral, and it always performed three function simultaneously viz, it helps the privileged to dominate, domesticate the underprivileged to their own status in society, and also tends to liberate the oppressed. Which of these function shall dominate and to what extent, depends mostly on one crucial factor, viz, The quality and quantity of the political education which the system provides or upon its 'political content'.

The developments in Indian society polity and education during the past hundred years should be viewed against the back ground of this brought philosophy. From very ancient time, the Indian society has always been elitist, and power, wealth and education were mostly confined to the upper castes of the society. What is important to note is that the system has an in finite capacity to adjust all to absorb and, for that very reason it is extremely resistant to any radical transformation. The social system continued to exist almost unchanged till the British administrators begin to lay the foundation of the modern system of education.
